Artificial Intelligence

Title	Duration (minutes)	Author	Description
• Artificial Intelligence: 01. What Is AI?	6	HSI-ej4	AI is transforming industries globally, from healthcare to finance. This course covers AI's definition, key components, and common applications, including tasks like learning, reasoning, and adapting to new situations.
• Artificial Intelligence: 02. Applying AI to Business	7	HSI-ej4	AI is transforming industries globally, from healthcare to finance. This course covers AI's definition, key components, and common applications, including tasks like learning, reasoning, and adapting to new situations.
• Artificial Intelligence: 03. The Ethics of AI	6	HSI-ej4	AI is transforming industries globally, from healthcare to finance. This course covers AI's definition, key components, and common applications, including tasks like learning, reasoning, and adapting to new situations.
• AI Regulation and Compliance	8	HSI-ej4	AI is an evolving technology with regulations still developing. This course covers current and emerging AI regulations, emphasizing transparency, fairness, and data protection, while also teaching ethical best practices for compliance.
• AI Security Concerns	8	HSI-ej4	As AI becomes more integrated into business operations, addressing security risks is crucial. This program covers cybersecurity threats, data breaches, AI manipulation, and methods to secure AI applications while maintaining compliance.
• Different Types of AI	9	HSI-ej4	AI is rapidly transforming industries, enhancing business operations. This program covers AI types and their applications to improve efficiency, reduce costs, enhance customer experiences, and drive innovation.
• How To Use Generative AI	8	HSI-ej4	This program explores generative AI, its applications in creating content, its benefits, limitations, and best practices for businesses.
• Using AI for Customer Service	7	HSI-ej4	This course covers AI tools for customer service, including chatbots, virtual assistants, and predictive support, highlighting benefits like improved efficiency, personalization, cost reduction, and future challenges.
• AI Business Essentials Part 1: ChatGPT	100	HSI-Bigger Brains	In this course, Chip Reaves teaches how to use AI tools like ChatGPT to boost workplace productivity. Learn to design effective prompts, such as Chain of Thought and Role Play, and leverage AI for tasks like content creation, research, customer service, translation, and software development.
